# Appearances should not deceive.

## Professional, need-based and timely calibration of laboratory equipment

The measurement accuracy of equipment is crucial for quality. During calibration, operational faults, discrepancies and uncertainties are determined and eliminated. This avoids measurement errors, as well as frustration. We can help to optimise your calibration processes, keep your costs and benefits within a predictable framework and ensure that you work with reliable measurements.

### Pipettes

Guarantee the complete performance and precision of your pipettes by having them calibrated and documented in accordance with European directives.

### Light booths

Illuminant, light temperature, illumination, light stability, UV light, etc. are measured using the specially-designed ColorBrick test system from HTS. A subsequent safety test is conducted in accordance with VDE (German Association for Electrical, Electronic & Information Technologies) requirements.

### Laboratory scales and analytical balances

- Compliance with measurement tolerances defined in plant, ISO or DKD (German Calibration Service) standards
- Validation from ISO documentation of scales and balances.

### Monitors (LCD flat screen monitors and CRT monitors)

Benefit from the colour quality of the monitor, together with the reliable application of colour profiles, and have full confidence in the final result.

### Conditioning cabinets

Provides assurance that the set temperature and humidity are within the permitted tolerances.

### Spectrophotometers

Make sure your colour measurements are always correct. We are an accredited partner of Datacolor and calibrate the equipment according to the extensive Datacolor SOPs.

### In the right hands

Facilitating the test-equipment monitoring process: Hi-Tec-Support's calibration specialists remind you of scheduled due dates, perform a calibration compliant with directives, and provide you with the necessary documentation in the form of a calibration report and an inspection sticker on the equipment. This can be arranged to coincide with the maintenance schedule, thereby enabling both maintenance and calibration to be completed during one visit. This saves time and money.

### Competence and experience

On account of our decades-long close collaboration with reputable design and manufacturing companies, you benefit from our entire range of services. Everything from preventative maintenance to hotline assistance. At all times.

### Test equipment as part of the quality management system

The DIN EN ISO 9000ff, QS 9000, GLP and GMP standards include information on test-equipment monitoring. If your company has been certified to the ISO 9000ff standard, then you are obliged to periodically test the accuracy of your results.

### Certified calibration process

1. Regular testing by means of a specified calibration process with defined and documented instructions for calibration
2. Recording of the test information in a calibration report
3. Identification of the calibration status of the equipment via an adhesive label

We are at your service - in Europe and adjoining countries.
